Fohhn adds to LINEA LX loudspeaker range

German manufacturer releases new LX-60 and LX-61 compact line arrays

Nürtingen, Germany, xx June 2015 – Fohhn Audio announces the release of two new models in its LINEA LX range of compact line array systems. The **Linea LX-60** and **LX-61** aim to combine all the advantages of innovative line array technology with first-class sound quality and a classic elegant design that integrates seamlessly into room architecture and stage areas.

The compact LX-60 is specially designed for installation applications in more challenging acoustic environments. The 200W two-way system is equipped with four 4" high performance low-mid drivers (arranged in a column) and a 1" compression driver with Fohhn Waveguide. This combination forms the basis of Fohhn's unique Hybrid Line Array Technology (a feature of all LINEA LX systems), which is widely renowned for delivering excellent reproduction of speech and music, superb dynamics and even audience coverage. Speaker adjustment is done via an integrated crossover with Intelligent Protection Circuit (IPC) to guard against overload. Components are enclosed in an elegant, lightweight aluminium housing, with slender dimensions (64x13x12cm) that enable the unit to integrate unobtrusively into a range of venues. The system offers a dispersion range of 140 x 30° (h x w) and is equipped with Phoenix terminals.

The new Linea LX-61 loudspeaker is designed for mobile applications. Incorporating the innovative technology of its LX-60 sibling, it is equipped with the same 4" high performance low-mid drivers and 1" compression driver with Waveguide. Its compact dimensions make for easy transportation and quick set-up. The unit is fitted with two Speakon connectors. For even more powerful sound reproduction, the LX-61 can also be combined with a range of Fohhn subwoofers.
