

Press release – for immediate release

## **Fohhn at the Integrated Systems Europe (ISE) 2015 at booth 7-H179**

**Nürtingen /Amsterdam, 19 January 2015** – At this year's ISE in Amsterdam Fohhn Audio will present technologies regarding Beam Steering, 3D sound and the intelligent active and fully digital audio network AIREA.

The intelligent sound and audio network system AIREA will be available for demonstration to our visitors and customers. AIREA is a network-based active solution developed specifically for high-quality, flexible and future-oriented sound reinforcement applications. The system is based on the most up-to-date speaker technology with integrated DSP technology and 2-channel class D amplifiers which guarantee excellent sound quality, maximum dynamic range, linear frequency response and absolute protection. The integrated signal processors also include features such as fully parametric equaliser, delay, dynamics and crossover; each speaker can also be customized and adjusted individually. The AIREA master modules come with AES/EBU inputs and outputs. All AIREA system components are connected by just one single conventional network cable, which supplies power as well as two channels of digital audio and the remote control signals from the master module to each individual speaker.

Furthermore, Fohhn will be presenting the latest Linea Focus and Focus Modular models which are all capable of electronic Beam Steering. These powerful systems have been developed to provide sound reinforcement in an intelligent and precise way, even for venues with the most adverse acoustic conditions, resulting in the best sound quality for speech as well as music, even in reverberant settings.

In addition, a 3D sound system will be installed at booth 7-H179 in cooperation with IOSONO, which can of course also be experienced live!

**Visit us from 10-12 February in Amsterdam at booth 7-H179! We are looking forward to your visit!**

### **About Fohhn**

Fohhn Audio AG specialises in the development and manufacture of professional loudspeaker systems for both mobile and fixed-installation sound reinforcement. For 20 years the company, based in Nürtingen in the South-west of Germany, has been developing system concepts that combine innovative design, functionality, state-of-the-art DSP, amplification and remote technology with first class sound quality and reliability.

Fohhn is currently distributed worldwide in more than 30 countries. Fohhn customers and users include among others: Neumann & Müller, the Charles de Gaulle airport in Paris, the University of Heidelberg, Mainz Cathedral, the Ruhrfestspielhaus in Recklinghausen, the Reduta Concert Hall in Bratislava, the SWR radio station in Stuttgart, the Danish Parliament, the German Pavilion, the Swiss Pavilion and the Chinese State Grid pavilion at Expo 2010 in Shanghai.

Fohhn loudspeakers are developed and manufactured in Germany.
